

KOH Colpotomizer™ System
for Simplified
Hysterectomy
from

CooperSurgical

Incision Making Simplified

The KOH Colpotomizer™ used in combination with the RUMI™ Uterine Manipulation System is a unique cost-effective means for accurate, safe colpotomy incisions during laparoscopic procedures. These easily assembled components provide a system which maximizes uterine mobility providing superior visualization of the surgical area, precise indication of anatomical landmarks, and adequate space to maneuver. Use of this outstanding system insures a significant difference in the way you operate.

Koh Cup™ Vaginal Fornices Delineator

See the Difference

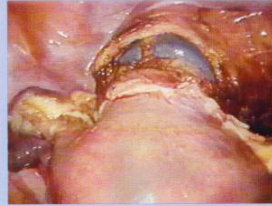

The KOH Cup™ Vaginal Fornices Delineator makes a difference you can see.

- Defines critical anatomy
- Targets optimal incision sites
- Prevents overdissection

Three different cup sizes allow optimal adaptation to anatomical variations.

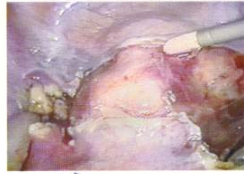

Available in both stainless steel and Ultem® polymeric resin.

Anterior Colpotomy

Feel The Difference

The KOH Cup™
Vaginal Fornices Delineator and
Colpo-pneumo Occluder™
components combine to make
a difference you can feel.

Uterovesical Peritoneum

The KOH Cup™

- Provides countertraction for blunt dissection
- Allows palpation for location of optimal colpotomy site
- Provides a cutting surface for accurate incisions
- Stretches and isolates tissue for accurate dissection

The Colpo-pneumo Occluder™

- Maintains surgeon control of pneumo-peritoneum
- Increases operating safety
- Allows laparoscopy to continue during and after colpotomy
